

Hanzala Sajjad

AI & Machine Learning | BS Computer Science

Karachi, Pakistan | hanzalasajjad0281@gmail.com | +92 336 2305576

OBJECTIVE

A motivated 3rd-year BS Computer Science student at UBIT, University of Karachi, currently enrolled in the NAVTTC-IBA Artificial Intelligence & Machine Learning Program. Proficient in Python, supervised and unsupervised machine learning, deep neural networks, and natural language processing. Seeking an AI/ML internship to translate academic knowledge into real-world impact, with a hardworking, team-player mindset and a strong can-do attitude.

TECHNICAL SKILLS

• Python: Core ML/AI language — primary tool for all projects	• Data Analysis: Pandas · NumPy · Data Wrangling & Visualisation
• Machine Learning: Scikit-learn · Regression · Classification · Model Evaluation	• Dev Tools: Google Colab · Jupyter · Git · VS Code · Java · Flutter · Dart
• Deep Learning: Neural Networks · Backpropagation · Architecture Design	• AI Tools: Prompt Engineering · Workflow Automation
• NLP / LLMs: Text Processing · Transformers · Sentiment Analysis	• Languages: Urdu (Native) · English (Professional Working)
• Database: MySQL · SQL Queries · Database Design · Supabase (PostgreSQL)	• MS Office: Microsoft Excel · Data Entry & Analysis · Spreadsheet Reporting
• Mobile Development: Flutter · Dart · Firebase (Auth & Firestore) · Cross-Platform Apps	• Programming: C · C++ · Java · OOP Principles · Backend Problem Solving

EDUCATION & CERTIFICATION

BS Computer Science | UBIT, University of Karachi | 2023 – Present (3rd Year)

AI / ML Training Program | NAVTTC & IBA — Karachi | 2026 (In Progress)

PROJECTS

ReadLog | Flutter · Dart · Firebase · Supabase | 2025

Independently designed and built a full-stack mobile book-tracking application from the ground up. Users can log books they have read, assign a personal score from 1 to 10, and set a reading status (Completed, Reading, Dropped, or Plan to Read). Engineered the backend architecture end-to-end: designed the Supabase (PostgreSQL) database schema, implemented Firebase Authentication, and developed all API logic and data-access functions in Dart. The app supports list filtering and sorting by status, delivering a clean and intuitive reading diary experience.

Fitnah Alert | Flutter · Dart · Firebase | 2025

A consumer-facing mobile application that allows users to scan product barcodes to determine whether a product originates from or is affiliated with Israeli companies. Led all backend development: architected the Firebase backend, designed the product and flagging database schema, and implemented the barcode-scanning and lookup logic. Collaborated on a cross-functional team, taking full ownership of backend creation, database design, and cloud function development.

Brick n Bash | Java · JavaFX | 2024

A 2D brick-breaker game built with Java and JavaFX in which the player controls a paddle to deflect a ball and destroy blocks across multiple levels. Responsible for all backend systems: implemented collision detection, ball physics, level progression logic, and score tracking using Object-Oriented Programming principles. Designed and balanced each game level and integrated per-level background music to enhance the gameplay experience.

KEY STRENGTHS

- **Quick Learner:** Adapts rapidly to new frameworks, tools, and problem domains.
- **Team Player:** Strong collaborative mindset with clear, professional communication skills.
- **AI-Powered Productivity:** Proficient in leveraging AI tools to improve efficiency and output quality.
- **Results-Driven:** Hardworking and goal-oriented with a consistent can-do attitude.
- **Nationally Recognised Training:** Actively pursuing NAVTTC–IBA AI/ML certification alongside university studies.
